Heartworm	✓	Adult Hookworms	✓
Ear mites	✓	Larval Hookworms	✓
Sarcoptic mites (dogs)	✓	Whipworms (dogs)	✓
Lice (dogs)	✓	Lungworms (cats)	✓

**One application lasts a month**

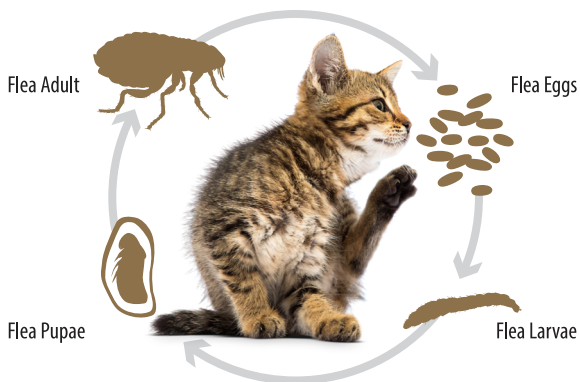

## Flea control and prevention

Fleas are a common parasite of cats and dogs. They bite and feed from your pet causing severe discomfort and irritation. Fleas infest your home with an adult flea producing up to 40-50 eggs a day. Flea bites may also result in your pet developing the skin disease flea allergy dermatitis.

Fortunately, Moxiclear has been shown to kill adult and larval fleas within 20 minutes of contact by absorption.

## Flea life cycle

Fleas are not required to bite your pet and they stop feeding in 3-5 minutes.

Moxiclear breaks the lifecycle at two stages and may be used as the only product for flea control. Fleas are not required to bite your pet as the medication is absorbed by contact. They stop feeding in 3-5 minutes and adult and larval fleas are killed within 20 minutes.

*If you are dealing with a flea infestation then watch this short video.*

## Heartworm prevention

Heartworms are worms that lodge in the arteries of the heart and lungs of our pets, causing them to struggle with exercise, become lethargic, and have difficulty breathing.

Heartworm is transmitted to your pet by mosquitoes (so even indoor pets are at risk!).

### Heartworm life cycle

Mosquito ingests young heartworm (larvae) while feeding on dog with adult heartworm disease becoming a carrier.

Heartworm develops over time within the mosquito. When the mosquito bites it will then infect the next dog or cat with heartworm.

Heartworm develop to 20cm worms within the heart and lungs affecting their function. Here adult heartworm will reproduce.

The young heartworm (larvae) enter the blood stream and migrate to the heart and lungs.

Continuous year-round prevention of heartworm by using Moxiclear monthly is recommended.

*Want to learn more about heartworm?*

## Intestinal worms

Intestinal worms can cause serious disease particularly in young dogs and cats. Your pet requires intestinal worm treatments from two weeks of life. Regular use of Moxiclear in puppies from 7 weeks and kittens from 9 weeks of age will protect your dog or cat from all important roundworms and hookworms, as well as whipworm in dogs.

## Trusted & safe protection for your pets and your family

***Water resistant after  
only 2 hours***

***Easy to apply monthly  
spot on***

***Safe for puppies from  
7 weeks and kittens  
from 9 weeks of age***

***Broad  
Spectrum***

***Affordable  
Protection***

### Lungworm in cats

Lungworms are worms that cats pick up while hunting. They migrate to the lungs where they cause disease. Given monthly, Moxiclear will protect your cat from lungworm.
